ENSURING STUDENT SUCCESS:
DETERMINING FACTORS AFFECTING
COLLEGE GRADUATION RATES

QUESTION
What factors make a student more or less likely to graduate from college?

BACKGROUND
- United States government has become increasingly interested with graduation rates.¹
- High school GPA is the best single predictor of whether a student will graduate.²
- SAT/ACT scores have also been shown to be significant in predicting whether a student will graduate.³
- Merit-based scholarships have positive relation to the likelihood a student will graduate but need-based scholarships have a negative effect.⁴

SURVEY & METHODS
- MapWorks survey given to 1900 incoming freshman
- Data obtained from a University in the Midwest
- Results obtained using a logit regression with robust standard errors
- Other tests ran to test for the presence of multicollinearity

REFERENCES

RESULTS
- High School GPA, students perception of their organizational skills and ability to pay, and whether a student is a first generation student are statistically significant when determining the likelihood of graduating.
- Students who are not first generation students have about 1.4 times the odds of graduating as their first generation counterparts.
- A 1 unit increase in a given student’s GPA increases the odds of that student graduating by a factor of almost 5.

CONCLUSIONS
- High School GPA still the single best predictor of a student likelihood of graduating.
- First generation students are less likely to graduate, likely due to less resources
- Students who are confident in organizational skills like managing time are more likely to graduate
- Students perceptions on their ability to pay has an impact on whether they will graduate or not
