Anticipatory Set/Introduction [Inquiry Question is required] (Req.): In the Social Sciences, it is important to use updated statistics to get some points communicated. As an introductory lesson, this activity familiarizes students with two important statistical databases: US Census and CIA World Factbook. How much do you know about world statistics?

Instructional Sequence/Procedure (Req.):

- 1. Students will complete a short introductory (hook) quiz: Introductory quiz regarding Census site:
 1) What percentage of the people in the United States have at least a bachelor's degree? 2)
 What percentage of people in the U.S. have a high school diploma? 3) Do you think the
 percentage of people in the U.S. that have a HS diploma is higher or lower than the percentage
 of people in Wellman that have a HS Diploma? 4) How many miles does the average Kalona
 resident travel to work? 5) What is the average age of someone living in Wellman?
- 2. Using the U.S. census bureau website, we will check the students' answers together.
- 3. The teacher will demonstrate how to use the site, and students will take notes for future use.
- 4. Students will complete another short quiz over country questions: Introductory quiz regarding CIA World Factbook site: 1) Amongst all countries in the world, where does the U.S. rank in terms of population? 2) What percentage of Americans are literate? 3) What percentage of Kenyans are literate? 4) What percentage of its Gross Domestic Product does Canada spend on its military?

5.	Together, the class will check the answers by locating them on				
	https://www.cia.gov/library/publications/the-world-factbook/.				
6.	Students should take notes on how to use this site as well.				
7.	Together with the teacher's assistance, the class should find two statistics to compare. Once				
	that is completed, the teacher should show students how to use Microsoft Excel to input the				
	data and create a bar or pie graph.				
8.					
0.	Here are their guidelines: Each student should use the census to compare 3 demographics from				
	any two cities of their choosing. They must also use the World Factbook to compare 3				
	demographics from any two countries. Once they have the information, they should use Excel to				
	create a graphic. The graphic must have all axes labeled, along with a title. The sheet should be				
	printed, as tomorrow all students will present their findings.				
9.	· · · · ·				
٦.	Wrap-up: Journal write: In paragraph form, students will respond to the following prompt – Describe some of the interesting information you found while investigating these sources. Make				
	at least two inferences about the information.
