NASA Launches Distribution Center for Aerospace Education Materials

The National Aeronautics and Space Administration (NASA) has established a national distribution center for educational materials as part of the NASA Teacher Resource Center Network. For a minimal charge, the NASA Central Operation of Resources for Educators (CORE) is able to make NASA-related, educational audiovisual materials available through its mail order service.

Educational materials available through NASA CORE include videotape, slide and filmstrip programs chronicling NASA's state-of-the-art research and technology. Through the use of these curriculum supplement materials, teachers can provide their students with the latest in aerospace information. NASA materials are available for use in discussions of life science, physical science, astronomy, energy, earth resources, environment, mathematics and career education.

Educators may request a catalog and order form by writing to NASA CORE, Lorain County JVS, 15181 Route 58 South, Oberlin, OH 44074. All requests should be written on school stationery.

Free-loan and Free Duplication Video Cassettes

Karol Media, in cooperation with a grant from Phillips Petroleum, has made several videotapes available to schools on a free-loan/free duplication program.

"The Challenge of the Unknown" and "The Search for Solutions" are two of the available series. "The Challenge of the Unknown" offers seven programs about mathematics and problem solving showing math in a new light to help elementary, junior and senior high school students. Each episode is 20 minutes long. "The Search for Solutions" is a nine-part series designed to teach the adventure of discovery and the fun of problem solving. Each episode presents a different problem-solving technique, including investigation, trial and error, theory and patterns.

To obtain the masters of these series and permission to duplicate them for school use, contact Karol Media, 22 Riverview Drive, Wayne, NJ 07470-9990.
