(1981) "Bad Breath," *Iowa Science Teachers Journal*: Vol. 18: No. 3, Article 10.

Available at: <https://scholarworks.uni.edu/istj/vol18/iss3/10>

This Article is brought to you for free and open access by the IAS Journals & Newsletters at UNI ScholarWorks. It has been accepted for inclusion in Iowa Science Teachers Journal by an authorized editor of UNI ScholarWorks. For more information, please contact scholarworks@uni.edu.

Offensive Materials Statement: Materials located in UNI ScholarWorks come from a broad range of sources and time periods. Some of these materials may contain offensive stereotypes, ideas, visuals, or language.

- There appears to be significant increases in the number of teachers with combination math/science teaching assignments.
- Consistent with national trends, it appears that the very small and very large school districts are experiencing the greatest staff and curricular changes.

Bad Breath

Why do garlic, onions and other pungent foods impart a lingering odor to breath?

The odor doesn't come from the stomach, because the gullet opens only occasionally, generally remaining collapsed like an empty tooth-paste tube, according to Claire Reyner in *Everything Your Doctor Would Tell You If He Had Time*. And it's not because remnant of foods linger in the mouth.

It's because the molecules that give foods a pungent aroma pass through the stomach walls and into the bloodstream, then into the lungs, from which they are expelled by breathing.
