This Back Matter is brought to you for free and open access by UNI ScholarWorks. It has been accepted for inclusion in Proceedings of the Iowa Academy of Science by an authorized editor of UNI ScholarWorks. For more information, please contact scholarworks@uni.edu.

Information for Authors

The editorial board cannot be responsible for correcting the form of articles submitted for publication in the Proceedings. We ask that the authors cooperate by closely following the form requested. Where manuscripts do not meet our requirements, they will be returned to the authors, and in some instances this may prevent their being readied in time for publication.

Papers considered for publication must be the results of original research or thoughtful contributions to their field. They will be judged on their merits as contributions of original data, ideas or interpretation, and on their conformity to good scientific style. Preference is shown to papers presented at the annual meeting, and to papers which are Iowa-centered in that they are completed at Iowa institutions or are about Iowa material.

Articles must be clear and concise. Accuracy in spelling, grammar, and use of standard abbreviations is essential. Paragraph headings, figures, and tables must conform to the instructions given below and in acceptable style manuals. Type manuscripts on good bond paper, 8½ by 11 inches, on one side only, double-spaced and with wide margins. Keep an exact copy of the manuscript as the submitted copy will not be returned.

Paging is important in the composition of the journal. Follow instructions implicitly. Page 1 is the title page; page 2 the abstract; page 3 starts the text. Put acknowledgements at the end of the text. Bibliography, tables, figure legends, and footnotes follow in that order. Put each table on a separate page, and the figure legends on a separate page. Number the pages consecutively in the upper right hand corner. Clip pages together; no not staple.

The title page: Place the title of the article, the author's name, the laboratory or institution of origin, a complete address for mailing proofs, summer address if need be, and a running head of not more than 35 letters and spaces on this page. Short titles of not more than 70 characters are preferred by abstracting and bibliographic services.

The abstract. Make it informative, concise, and complete in itself. Tell what was done, what was found, and what was concluded in a maximum of 200 words. It should be suitable for abstracting journals without revision.

Headings. Main subdivision headings should be centered and typed in capitals. Second order headings should be placed flush

with the left margin, with major words capitalized, and underlined. Third order headings, if needed, should be indented as a paragraph, underlined, with only the first letter capitalized. Start the text immediately after the third order title.

Composition. Indicate the preferred placing of figures on tables, in the following manner:

.
Insert Fig. 1 about here
.

Footnotes. They are expensive to set and should be used sparingly. Type them on the last page, double-spaced, and with each footnote starting a new paragraph. If possible, only the author's address and acknowledgements to granting agencies should appear as footnotes.

References. Include only references actually cited. References should follow the form indicated as preferred by the style book used. The title may be omitted to conserve space, at the editor's discretion.

Tables. Put each table on a separate page. Table number, in arabic, and title go at the top of the page. Do not duplicate tables with graphs or other figures. Indicate the position preferred for tables as for figures.

Figure legends. Figure legends must be provided for each figure. Number figures in arabic. Do not incorporate legends in the figures.

Figures. Figures are very important to a paper, and should be prepared with care. Do not send the originals of line drawings. Submit a glossy photograph, no larger than 8 x 14 inches. Keep the dimensions of the journal page, 4 x 7 inches, in mind. Line drawings are best prepared at twice the printed size, with lettering and line thickness appropriately adjusted. Line drawings or photographs lose detail if they must be reduced too far.

Identify every figure with the figure number and author's name on the reverse side. If there could be any doubt, indicate the top of the figure. A scale in microns or other dimension shown on the figure will avoid any imprecisions in quoting magnification in the figure legend. If the magnification must be given in the figure legend, write the magnification on the back of the figure, so it can be appropriately corrected before printing.

Plates collecting figures are preferred to singles scattered in the text. Plates should be made and photographed before submission. The editorial board cannot undertake the preparation of plates

from submitted figures. Make the original of the plate some multiple of $4 \times 6\frac{1}{2}$ inches to provide room for the figure legend. If the legend is very long, reduce the height of the plate accordingly.

Figures are expensive. Poor figures are not worth the cost of printing. Include only those that are really necessary; make sure each is of excellent quality. Keep chemical structural formulae and process flow diagrams to a minimum. Treat them as line drawings for reproduction.

Lettering should be precise and clean. Any letters that will be less than 1 mm high after reduction will be nearly illegible. Letter with a template or stencil rather than trying free-hand lettering.

Galleys. Galley proofs will be sent to authors as soon as possible. The author is expected to correct the galley carefully and to return them promptly. Minor alterations for brevity and conciseness may have been made. If major revisions are required, manuscripts will be returned with suggestions. If minor revisions have modified the author's meaning, they should be modified on the galleys. Engraver's proofs will not be sent to authors unless requested, or if the editor believes they need checking.

The following are the approved style manuals:
