## Information for Authors

The editorial board cannot be responsible for correcting the form of articles submitted for publication in the Proceedings. We ask that the authors cooperate by closely following the form requested. Where manuscripts do not meet our requirements they will be returned to the authors, and in some instances, this may prevent their being readied in time for publication.

Papers considered for publication should be the results of original investigations. They will be judged on their merits as contributions of original data, ideas, or interpretation, and on their conformity to good scientific style. Preference is shown to papers presented at the annual meeting, and to papers which are Iowa-centered in that they are accomplished at Iowa institutions or are about Iowa material.

Articles must be clear and concise. Accuracy in spelling, grammar, and use of standard abbreviations is essential. Paragraph headings, figures, and tables must be in conformity with instructions given below and acceptable style manuals. Type manuscripts on good bond paper, 8½ by 11 inches, on one side only, double spaced, and with wide margins. Keep an exact copy of the manuscript as the submitted copy will not be returned.

*Paging* is important in composition of the volume. Follow instructions implicitly. Page 1 is the title page; page 2 the abstract; page 3 starts the text. Put acknowledgements at the end of the text. Bibliography tables, figure legends, and footnotes, follow in this order. Put each table on a separate page, and the figure legends on a separate page. Number the pages consecutively in the upper right hand corner. Clip pages together; do not staple.

*The title page:* Place the title of the article, the author's name, the laboratory or institution of origin, a complete address for mailing proofs, summer address if need be, and a running head of not more than 35 letters and spaces in this order. Short titles of not more than 70 characters are preferred by abstracting and bibliographic services.

*The Abstract.* Make it informative, concise, and complete in itself. Tell what was done, what was found, and what was concluded in a maximum of 200 words. It should be suitable for abstracting journals without revision.

*Headings.* Main subdivision headings should be centered and typed in capitals. Second order headings should be placed flush with the left margin, with major words in caps, and underlined.

Third order headings, if needed, should be indented as a paragraph, underlined, and with only the first word capitalized. Start the text immediately after the end of the third order title.

*Composition:* Indicate the preferred placing of figures or tables, in the following manner in the text:

. . . . .  
 Insert Figure 1 about here  
 . . . . .

*Footnotes.* Expensive to set, and should be used sparingly. Type them on last page, double spaced, with each footnote beginning a new paragraph. Only acknowledgements to granting agencies and author's address should appear as a footnote, if possible.

*References.* Include only references actually cited. References should follow the form indicated as preferred by the style book used. The title may be omitted to conserve space, at the editor's discretion.

*Tables.* Put each table on a separate page. Table number, in arabic, and title go at the top of the page. Do not duplicate tables with graphs or other figures.

*Figure legends.* Figure legends must be provided for each figure. Number figures in arabic. Do not incorporate legends in the figures.

*Figures.* Figures are very important to a paper, and should be prepared with care. Do not send the originals of line drawings. Submit a glossy photograph no larger than 8 x 14 inches. Keep the dimensions of the journal page in mind (4 by 7 inches). Line drawings are best when prepared at twice the printed size, with lettering and line thickness appropriately adjusted. Line drawings or photographs lose detail if they must be reduced too far.

Identify every figure with the figure number and author's name on the reverse side. If there could be any doubt, indicate the top of the figure. If the magnification of the figure is given in the figure legend, write the magnification on the back of the figure, with a note that it is mentioned in the figure legend, so this can be corrected appropriately before printing. If the scale in microns is shown in the figure, magnification will be precise; this is favored.

Plates of figures are preferred to singles scattered in the text. Plates should be made up and photographed before submission. The editorial board cannot prepare plates from submitted figures.

Make the original of the plate some multiple of 4 by 6½ inches to

provide room for the figure legend. If the legend is very long, reduce the height of the plate accordingly.

*Figures are expensive.* Poor figures are not worth the cost of printing them. Be sure that you include only those that are really necessary, and that each one is of excellent quality. Keep chemical structural formulas and process flow diagrams to a minimum. Treat them as line drawings for reproduction.

Lettering should be precise and clean. Any letters that will be less than 1 mm. high after reduction will not be legible. Avoid such small letters. Letter with a template or stencil rather than attempting free-hand lettering.

*Galleys.* Galley proof will be sent to the authors as quickly as possible. The author is responsible for correcting the galleys carefully and returning them promptly. Very minor alterations for brevity and conciseness may have been made. If the editorial board feels that major alterations are necessary, they will return the manuscript with suggestions. If such minor alterations modify the sense of what the author intended, they should be modified on the galley proof. Engravers proofs will not be sent to authors unless requested. If the editor is dubious about the quality of a figure, he will send it for approval.

The following are the approved style manuals:

- Biological Fields:** Style Manual for Biological Journals  
AIBS  
2000 P. Street, Washington, D.C.
- Chemistry:** "Notice to Authors" in Feb. 5th, May 5th,  
August 5th & November 5th issues of Journal  
of American Chemical Society.
- Geology:** Suggestions to Authors of the Reports of the  
United States Geological Survey. Supt. of  
Documents, Washington, D.C.
- Physics:** American Institute of Physics Style Manual,  
American Institution of Physics, 335 E. 45th  
St., New York, 17, New York
- Psychology:** Publication Manual of American Psycho-  
logical Association.
