Public High Schools Offering Chemistry in Iowa

By JAMES W. KERCHEVAL

In a Report on a Survey of Science Instruction in the High Schools of Iowa¹, the author presented data based upon reports from 390 or 46% of the 852 senior high schools in Iowa in 1951-52. Since that time further effort has brought additional data from all but 38 of the present 849 high schools. This leaves but 4.5% unreported at this time.

The following report covers data collected over the years 1951 through 1954. The information at hand shows that one semester or more of chemistry is offered either on alternate years or is offered each year in 334 of the Iowa public high schools. This constitutes 39.4% of the present 849 high schools.

Fig. 1 Location of Schools Offering Chemistry

The map shown in Figure 1 indicates the approximate location and geographical distribution of these schools over the state. Several generalizations can be observed. Chemistry is offered in at least one high school in every county. The three tiers of southern counties have the lowest average number of schools offering the course

Table I.
Enrollments in all Iowa High Schools
and in those offering Chemistry

High School Enrollment	Total of all Iowa High Schools (849) ³ Number	%	High Schools Offering Chemistry (334) ⁵ Number	%	Percent of Total Iowa H.S. that Offer Chemistry	Percent of H.S. of each size Offering Chem.
1-24	29	3.4	0	0	0	0
25-49	189	22.2	24	7.2	2.8	12.8
50-74	198	23.4	38	11.4	4.5	19.2
75-99	139	16.4	55	16.5	6.5	39.6
100-149	117	13.8	61	18.3	7.2	52.5
150-199	52	6.1	36	10.8	4.2	69.5
200-299	39	4.6	39	11.7	4.6	100.0
300-399	35	4.1	32	9.6	3.8	91.5
400 or more	51	6.0	49	14.6	5.8	96.1
	849	100.0	334	100.1	39.4	

the number of schools, by enrollment, that are offering chemistry and the per cent of the total (334) which each size group constitutes. In general the impression has been that small high schools do not offer chemistry. That this is true is shown in the last column. Only a small per cent of the small schools offer chemistry, but the fact that at least 62 of these schools of enrollments of 74 or less indicate that they offer it is encouraging⁵. Further the data shows that nearly all of our high schools of 200 or larger offer the course. The lack of offering in our smaller schools probably is responsible for Iowa's low enrollment in high school chemistry. In 1949 only 3.9% of our total four year high school enrollment were in chemistry classes⁶. The national average that same year was 7.6% or over twice as great as Iowa's⁷.

As mentioned in the first paragraph the data presented in this report is not complete for the entire state. Table 2 shows the number and size of the schools from which no reports were received. However the basis of the size of enrollment it seems unlikely that more than one or two of these schools would be offering chemistry. As a consequence the list of schools presented in Table 3 may be assumed to be essentially complete for the period covered.

⁵Enrollment based upon the Iowa Educational Directory for 1953-4.
