## TECHNIQUE OF RADIOGRAPHY WITH SOFT X-RAYS

F. M. BAILEY

The soft x-ray apparatus which was developed has been applied to the radiography of small biological specimens and other material requiring long wavelengths to produce sufficient contrast. Stereoscopic technique has also been used in order to provide three dimensional views of specimens.

THE MAGIC EYE — A DEMONSTRATION  
EXPERIMENT

E. HOBART COLLINS

The control of electrons is demonstrated with electric and magnetic fields with a raditron 6E5, the magic eye tube. The electric field is applied in the usual mannner, the magnetic field by means of a permanent magnet and a helmoltz coil. Its effectiveness when used in connection with the motion picture, "Electrons," is discussed.

PHOTOGRAPHY — A PHYSICS COURSE FOR THE  
SMALL COLLEGE

ROGER M. MORROW

Photography makes an excellent science course for interested students with varying degrees of preparation. Excellent text books have been published. The need of exact quantitative experiments has been pointed out. Several such experiments are available.
